

**2014
FLORIDA YOUTH
SUBSTANCE ABUSE SURVEY**

Collier County

Methodology

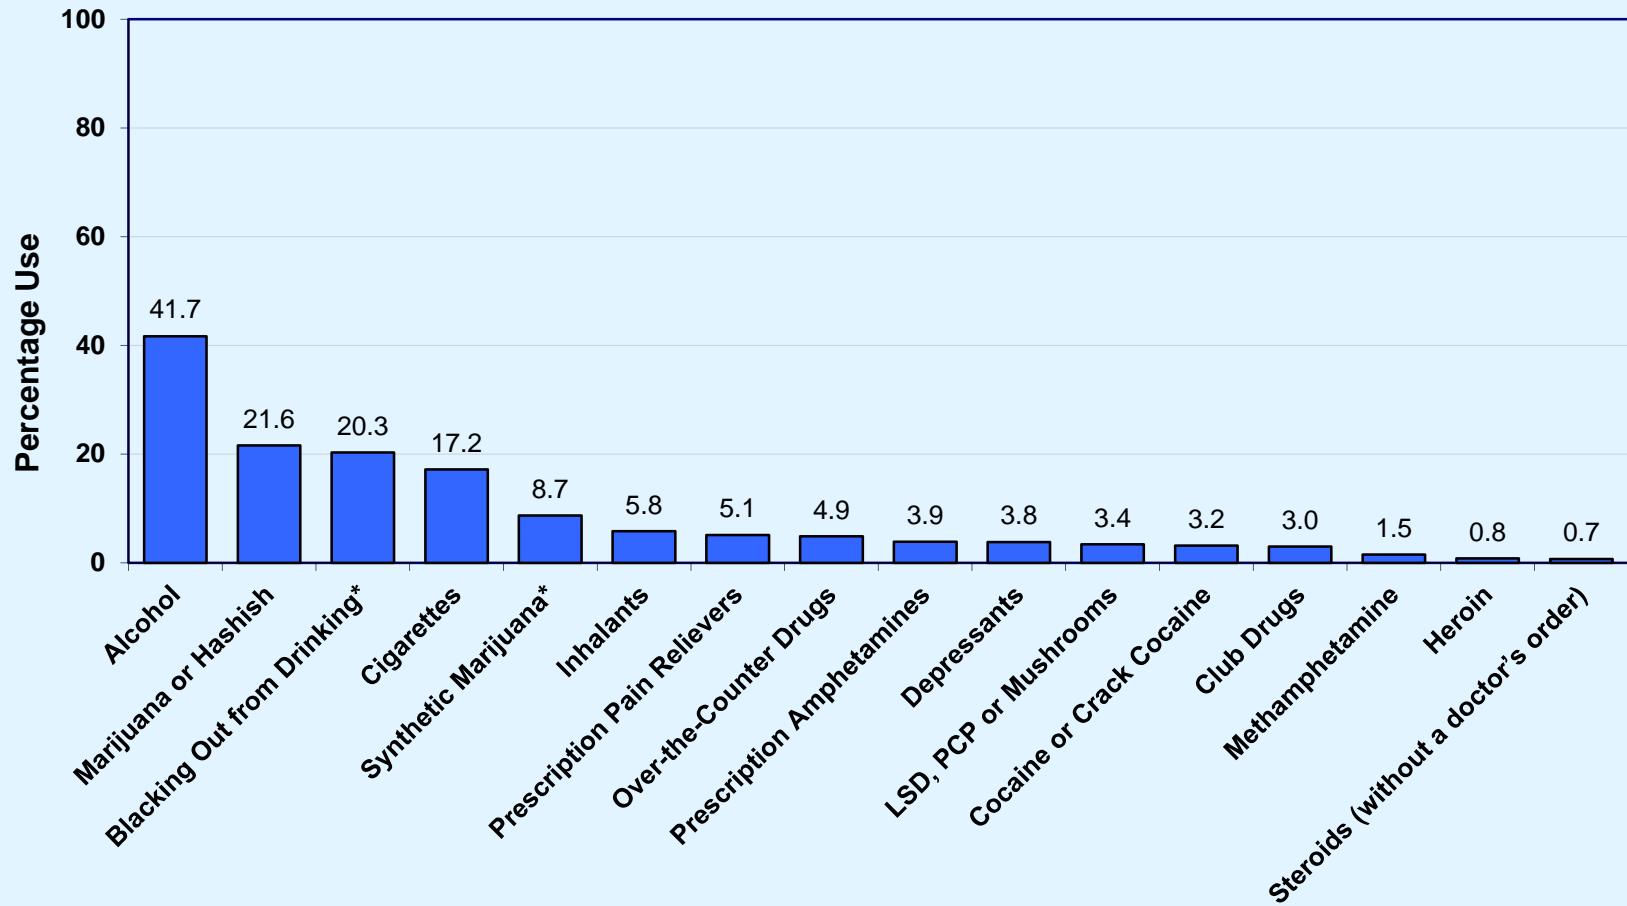

- Survey administration: February of 2014.
- Sampling strategy: schools and classrooms were selected to generate statistically representative county-level estimates.
- Final sample size was 1,264 across grades 6 through 12.
- The margin of error is less than 5.0 percentage points for M.S. prevalence rates and 5.8 percentage points for H.S. prevalence rates.

Lifetime and Past-30-Day ATOD Prevalence Rates

2014 Results

Community domain and family domain risk factor prevalence rates for Collier County and Florida Statewide high school students, 2014

**Graph
28**

School domain and peer and individual domain risk factor prevalence rates for Collier County and Florida Statewide high school students, 2014

Key Findings

- Protective factor prevalence rates—opportunities for improvement:
 - Middle school students reported the lowest rates of protection for the *Community Rewards for Prosocial Involvement* (49%) and *Religiosity* (47%) scales.
 - High school students reported the lowest rates of protection for the *Community Rewards for Prosocial Involvement* (55%) and *Family Rewards for Prosocial Involvement* (55%) scales.

Key Findings

- Risk factor prevalence rates—opportunities for improvement:
 - Middle school students reported the highest rates of risk for the *Transitions and Mobility* (59%) and *Lack of Commitment to School* (52%) scales.
 - High school students reported the highest rates of risk for the *Transitions and Mobility* (58%) and *Lack of Commitment to School* (54%) scales.
